SUMMARY

Final-year AI & Data Science student specializing in Cloud & DevOps, with hands-on experience building end-to-end CI/CD pipelines using **Docker**, **GitHub Actions**, **Trivy**, and **Kubernetes (ArgoCD GitOps)** with **Prometheus/Grafana** observability. **AWS Certified Cloud Practitioner** with strong **Python** foundations, proven through production-grade infra work on full-stack projects. Open Source Lead at GDG on Campus, driving collaborative developer initiatives.

TECHNICAL SKILLS

Languages	Python
DevOps & Cloud	Docker, Kubernetes, AWS, GitHub Actions (CI), ArgoCD, Linux
Databases	MySQL, MongoDB, Redis
Tools	Git, GitHub, Prometheus, Grafana, Trivy

INTERNSHIP

Deep Learning & Full Stack Intern <i>AI Leela (OM Intelligence)</i> <i>Python · Flask · Docker · MySQL · Google OAuth2 · SQLAlchemy</i> ► Built Doctorra — AI-powered Clinic Queue & Intake System with QR-code check-in, real-time Kanban dashboard, and Gemini 2.5 Flash-Lite triage (via LangChain) that generates personalized MCQs per patient complaint with 100% uptime smart fallback. ► Implemented Google OAuth2 + local auth, modular Flask Blueprint architecture, SQLAlchemy ORM on MySQL; containerized with Docker Compose — recognized by CEO & CTO for product-first mindset.	Dec 2025 – Feb 2026
---	---------------------

LEADERSHIP

Open Source Lead <i>Google Developer Group on Campus, Nashik</i> ► Organized 5+ workshops and agile sessions for a 300+ member community; mentored 40+ students on Git, cloud tools, and full-stack development across many collaborative projects.	Sept 2025 – July 2026
--	-----------------------

PROJECTS

CodeShare — Containerized GitOps Deployment & Observability Infrastructure <i>Docker · Kubernetes · Kind · GitHub Actions (CI) · ArgoCD (GitOps) · Prometheus · Grafana · Trivy · Nginx</i> ► Dockerized a Node.js backend and React client using multi-stage builds served via Nginx; automated container builds and GHCR publishing via GitHub Actions with integrated Trivy security scans for CVE analysis. ► Deployed multi-replica workloads to a local Kind Kubernetes cluster managed by ArgoCD for GitOps-driven deployment; configured custom Liveness/Readiness probes enabling self-healing within 15 seconds. ► Integrated Prometheus Operator and ServiceMonitors to scrape application performance metrics; configured Horizontal Pod Autoscaling (HPA) to scale pods (2 to 5) at 70% CPU, visualized on Grafana.	<i>codesharre.vercel.app</i>
AnyDesk — Cloud-Native Remote Desktop with Full DevOps Pipeline <i>WebRTC · Electron · Docker · Kubernetes · ArgoCD · GitHub Actions · Prometheus/Grafana</i> ► Built a P2P remote-desktop system (WebRTC screen streaming + OS-level input injection via nut.js) with a Socket.io/Redis signaling layer, then containerized and shipped it through a full production-grade DevOps pipeline — Dockerized services, GHCR image registry, GitHub Actions CI with Trivy vulnerability scanning on every build. ► Deployed signaling infrastructure to Kubernetes with ArgoCD-driven GitOps, enabling automated, declarative rollouts and self-healing deployments without manual intervention. ► Set up Prometheus and Grafana for real-time observability into WebRTC session metrics, signaling server load, and Redis room-code throughput, giving full visibility into P2P connection health at scale.	<i>gauravdesk.vercel.app</i>

ACHIEVEMENTS & CERTIFICATIONS

Achievement	1st Place — GDG Nashik Hackathon 2026
Certifications	Cloud Practitioner — GFG • Generative AI Certificate • C++ Spoken Tutorial — IIT Bombay • Python — IIT Bombay

EDUCATION

B.E , Artificial Intelligence & Data Science <i>MET Institute of Engineering, Nashik (Savitribai Phule Pune University)</i>	2023 – Present CGPA: 8.8
---	-----------------------------
