SUMMARY

Final-year AI & Data Science engineer with strong command of Python, having built and deployed production-grade AI systems including Retail-Eye (AI-powered shelf auditing system) and a Resume Screening RAG Pipeline. Specializing in Cloud/DevOps, with hands-on experience deploying and containerizing real-world applications.

TECHNICAL SKILLS

Languages	C++, Python, JavaScript, TypeScript
Frontend	React.js, Vite, Streamlit, Zustand, Tailwind CSS, Jinja2
Backend	Node.js, Express.js, Flask, LangChain, PyTorch
DevOps & Cloud	Docker, Kubernetes, Jenkins CI/CD, AWS, GitHub Actions (CI), ArgoCD, Linux
Databases	MySQL, MongoDB, Postgres (PGVector), Redis (TTL, Pub/Sub)
Tools	Git, GitHub, Postman, VS Code, Prometheus, Grafana, Trivy

EXPERIENCE

Deep Learning & Full Stack Intern

Dec 2025 – Feb 2026

AI Leela (OM Intelligence)

Python · Flask · Docker · Ubuntu · LangChain · Gemini 2.5 Flash-Lite · MySQL · Google OAuth2 · SQLAlchemy

- ▶ Built **Doctorra** — AI-powered Clinic Queue & Intake System with QR-code check-in, real-time Kanban dashboard, and **Gemini 2.5 Flash-Lite triage** (via LangChain) that generates personalized MCQs per patient complaint with **100% uptime smart fallback**.
- ▶ Implemented Google OAuth2 + local auth, modular Flask Blueprint architecture, SQLAlchemy ORM on MySQL; containerized with Docker Compose on Ubuntu — **recognized by CEO & CTO for product-first mindset**.

LEADERSHIP

Open Source Lead

Sept 2025 – July 2026

Google Developer Group on Campus, Nashik

- ▶ Organized 5+ workshops and agile sessions for a **300+ member community**; mentored 40+ students on Git, cloud tools, and full-stack development across many collaborative projects.

PROJECTS

Retail-Eye — AI-Powered Shelf Auditing & Inventory Management SaaS

PostgreSQL · PGVector · YOLOv8 · ResNet50 (PyTorch) · Docker · Bootstrap 5

- ▶ Built an end-to-end visual product recognition pipeline — YOLOv8 for class-agnostic shelf detection, ResNet50 for 2048-dimensional embedding extraction, matched via native PostgreSQL PGVector cosine-distance search (no in-memory Python looping).
- ▶ Designed a configurable similarity-matching system with a tunable cosine threshold (0.5 default) to handle real-world lighting shifts and camera tilt, flagging unmatched detections as “Unknown” instead of forcing false positives.
- ▶ Wrote a 10-case automated test suite covering embedding shape validation, corrupt-image handling, threshold edge cases, and auth-gated views; enforced git hygiene by excluding model weights, .env secrets, and media uploads from version control.

Resume Screening RAG Pipeline — LLM-Powered Hiring Assistant

Python · LangChain · OpenAI · FAISS · HuggingFace · Streamlit

- ▶ Built an adaptive RAG pipeline with intent-based query routing (via OpenAI bind_tools) — job descriptions trigger RAG Fusion semantic search, applicant IDs trigger direct lookup, and general chat bypasses retrieval entirely to avoid unnecessary LLM calls.
- ▶ Implemented RAG Fusion with Reciprocal Rank Fusion — generates 3–4 sub-queries per job description, retrieves top-20 chunks per query from FAISS, de-duplicates by best match score, and re-ranks into a unified candidate list.
- ▶ Designed a small-to-big retrieval strategy (1024-token chunks, 500 overlap) to keep semantic search precise while feeding the LLM generator full resume text for top-5 candidates, preventing context loss; migrated the agent stack to LangChain 0.3 native tool-calling, removing legacy components.

ACHIEVEMENTS & CERTIFICATIONS

Achievement 1st Place — GDG Nashik Hackathon 2025

Certifications Cloud Practitioner — GFG • Generative AI Certificate • C++ Spoken Tutorial — IIT Bombay • Python — IIT Bombay

EDUCATION

B.E , Artificial Intelligence & Data Science

MET Institute of Engineering, Nashik (Savitribai Phule Pune University)

2023 – Present

CGPA: 8.8
