## SUMMARY

Final-year AI & Data Science student specializing in Cloud & DevOps, with hands-on experience building end-to-end CI/CD pipelines using **Docker**, **GitHub Actions**, **Trivy**, and **Kubernetes (ArgoCD GitOps)** with **Prometheus/Grafana** observability. **AWS Certified Cloud Practitioner** with strong **Python** foundations, proven through production-grade infra work on full-stack projects. Open Source Lead at GDG on Campus, driving collaborative developer initiatives.

## TECHNICAL SKILLS

|                |                                                             |
|----------------|-------------------------------------------------------------|
| Languages      | Python                                                      |
| DevOps & Cloud | Docker, Kubernetes, AWS, GitHub Actions (CI), ArgoCD, Linux |
| Databases      | MySQL, MongoDB, Redis                                       |
| Tools          | Git, GitHub, Prometheus, Grafana, Trivy                     |

## INTERNSHIP

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                            |
